SUMMARY

Java Backend Engineer with 4 years of experience designing and developing high-volume, mission-critical enterprise systems using **Core Java, Java 8/11, Spring Boot, Microservices, REST APIs, and Distributed Systems**. Strengthened delivery speed by **embedding AI-assisted** engineering workflows and improving **cross-team integration** across parallel product streams. Proficient in event-driven architecture, RBAC, API design, cloud-native deployments, and CI/CD.

SKILLS

- **Languages & Frameworks:** Java 17, Java 21, SQL, Spring Security, Spring Data JPA, Hibernate (ORM), Actuator
- **Concurrency and Core Java:** Multithreading, ExecutorService, CompletableFuture, Concurrent Collections, Virtual Threads, Circuit Breaker, OAuth2
- **Databases & Messaging:** PostgreSQL, MySQL, Oracle PL/SQL, MongoDB, Redis, Apache Kafka, Kafka Streams, JDBC, JMS, Database Sharding, Indexing Strategies, CAP Theorem, ActiveMQ
- **Cloud & DevOps:** AWS (EC2, Lambda, S3, VPC), Azure, GCP, Docker, Kubernetes, Maven, Gradle, Git, GitHub, Jenkins, CI/CD pipelines, GitHub Actions, API Gateway, Rate Limiting, Linux
- **Testing & Dev Tools:** JUnit, Mockito, Unit Testing, TDD, IntelliJ IDEA, JIRA, GitHub Copilot, Codium AI, Cursor, Claude, Swagger/OpenAPI, Prometheus, Grafana, Distributed Tracing
- **Methodologies & Architecture:** OOPs Concepts, SOLID Principles, Scrum, Event-Driven Architecture, Distributed Systems, System Design, HLD, LLD, RESTful APIs, Web Services, JWT, Exception Handling, Design Patterns

WORK EXPERIENCE

Nagarro, Remote

July 2025 – Present

Senior Software Engineer | Client CSX

- Designed and delivered event driven microservice modules using **Spring Boot** and **Java 17**, improving cross team integration velocity across **4 parallel product streams** and reducing inter-service dependency conflicts.
- Led a **Gradle-to-Maven** migration on a **100K+ LOC distributed system**, using **AI assisted** dependency mapping to eliminate 3 recurring build failures per sprint and cut manual validation overhead significantly.
- **Embedded GitHub Copilot** across the full SDLC, reducing implementation time on repetitive modules by **45%** and freeing engineering bandwidth for system design and architecture work.
- Led **Agile ceremonies** (standups, sprint planning, retros) as technical lead across 6 sprints, sustaining a **95%+ sprint completion rate** while coordinating cross-functional delivery.
- **Mentored 2 junior engineers** on microservice design patterns and REST API best practices, cutting average PR review cycles from 4 rounds to 1.5.

Capgemini, Bengaluru

Sep 2022 – July 2025

Software Engineer | Client M Kors

- Owned end-to-end feature delivery across 2 product lines on a 2 week Agile sprint cadence, achieving **zero critical back-end production incidents** in the final 6 months of tenure.
- **Architected and integrated 15+ RESTful APIs** across 3 product lines using Spring Boot and Swagger/OpenAPI, delivering a **25% reduction in API response times** through efficient endpoint design and caching strategy.
- Implemented a **Redis caching layer**, reducing server response time by **10%** and improving load handling by **20%**; optimized **Spring Data JPA** queries, improving data access speed by **35%**.
- **Refactored legacy Spring MVC modules** into clean, testable components, raising JUnit test coverage from **40% to 80%** and reducing production regression incidents.
- **Architected a layered microservice design** (Core, Driven, Driving layers) and **launched a MongoDB data pipeline service** from scratch, delivering within 3 sprints of requirement sign-offs.
- **Tuned Oracle PL/SQL and MySQL queries** through indexing and query-plan analysis (**30% faster report generation**) while triaging **100+ defects** across 2 products over 8 sprints in JIRA, maintaining a defect escape rate below 5%.

PROJECTS

Event-Driven Notification Service

- Designed a **multi-module** (API + Worker) notification system using Spring Boot and **Redis Streams** to decouple synchronous API acceptance from asynchronous delivery, **reducing API response latency by 30%**.
- Implemented **idempotency keys** with unique DB constraints for exactly-once semantics, exponential-backoff retries, and **dead-letter queueing** for permanent failures.

EDUCATION

GLA University, Mathura

August 2019 – May 2022

Bachelor of Computer Applications (BCA)

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- Microsoft Azure Fundamentals
- Capgemini Certified Java Full Stack Developer - Level 2
- Agile Software Development
